Belt description

Chain Drive Mesh Belts are the ideal solution for industrial applications where positive drive, timing and transferring are required such as inclines/declines, long distances and heavy loads.

With our Balanced Weave structure, the Chain Drive Mesh Belt can be supplied with any needed product support for any kind of product and/or industrial application!

As the Balance Weave structure is highly customizable, the belt can be customized to your industrial application requirements and needs. Furthermore, the Balance Weave structure can be customized with side plates and flights to further improve product transfer.
