

# Accumulation Chain

Close-up of the Accumulation Chain.

## Chain data

Pitch:	50,0 mm.
Width:	50,0 mm.
Height:	24,0 mm.
Material:	Chain: AISI 304. Roller: Polyamide black.

## Chain description

The Accumulation Chain provides better flexibility and efficiency in the accumulation area. Due to the need to accumulate boxes ahead of the output to palletize, the Accumulation Chain was developed.

Modular belts with accumulation rollers often give unintentional wear to the crates and the construction is often not adaptable to existing chains. The Accumulation Chain can accumulate up to 25 boxes in series and can fit into existing tracks of the plast chain 1702! Furthermore, the chain can be used for lifting out and advancing to the pickup point for robots.

For more information regarding setup, possibilities, customization and options feel free to contact us!

## Sprocket data

Material:	Polyamide white.
Standard width:	25,0 mm.
Bore size:	As requested, including keyway.

Number of teeth:	Pitch diameter:
6	100,0 mm.
8	130,0 mm.
10	161,8 mm.
12	193,2 mm.
15	240,0 mm.
16	258,3 mm.
