Belt description

The DKT50-225 is a strong, straight running and positive driven conveyor belt, especially designed and engineered for the food processing industry. The perforated deck has an opening of 6 x 12 mm with an open surface of 25 %, thereby being best suitable for the transportation of vegetables, meat, fish and fruits where drain with bigger openings are required.

Although by default only flights are optional with a height of 25 mm, 50 mm, 75 mm, or 100 mm, the belt can be configured in a hybrid solution for extra options, strength, and durability. With the hybrid configuration, the belt can be adjusted to support side and/or centre chain(s), side plates, custom flights, and guide blocks.
