

Drive & Idle Cage Drum

Drum description

When a Multi Eye Link Belt, Plate Link Belt, or a Hybrid Belt will be used for a high capacity industrial application with high loads, DK Transportbaand will always recommend the Drive & Idle Cage Drum. The Drive & Idle Cage Drum ensures an equal transmission of power from the drum to the conveyor belt over the entire width of the belt, thereby creating a longer life-span of the belt and cage drum!

With high capacity production and high loads, positioning of the belt is key to ensure a smooth production flow. The Drive & Idle Cage Drum is engineered for optimal positioning of the belt to ensure a smooth production flow.
